

MAXEM®

SMART CHARGING

WE ARE MAXEM
ACCELERATORS OF THE

ENERGY TRANSITION

OUR PURPOSE

To accelerate the energy transition with smart (charging) solutions that contribute to a sustainable future.

MAXEM[®]

MAXEM®

ACTIVE IN 11 COUNTRIES

Headquarters in
The Netherlands

4 years active in
Energy Management

EV Charging Platform
(CPO) and Energy
Management specialist

Installed base of
1500+ Maxem Home &
Pro Controllers

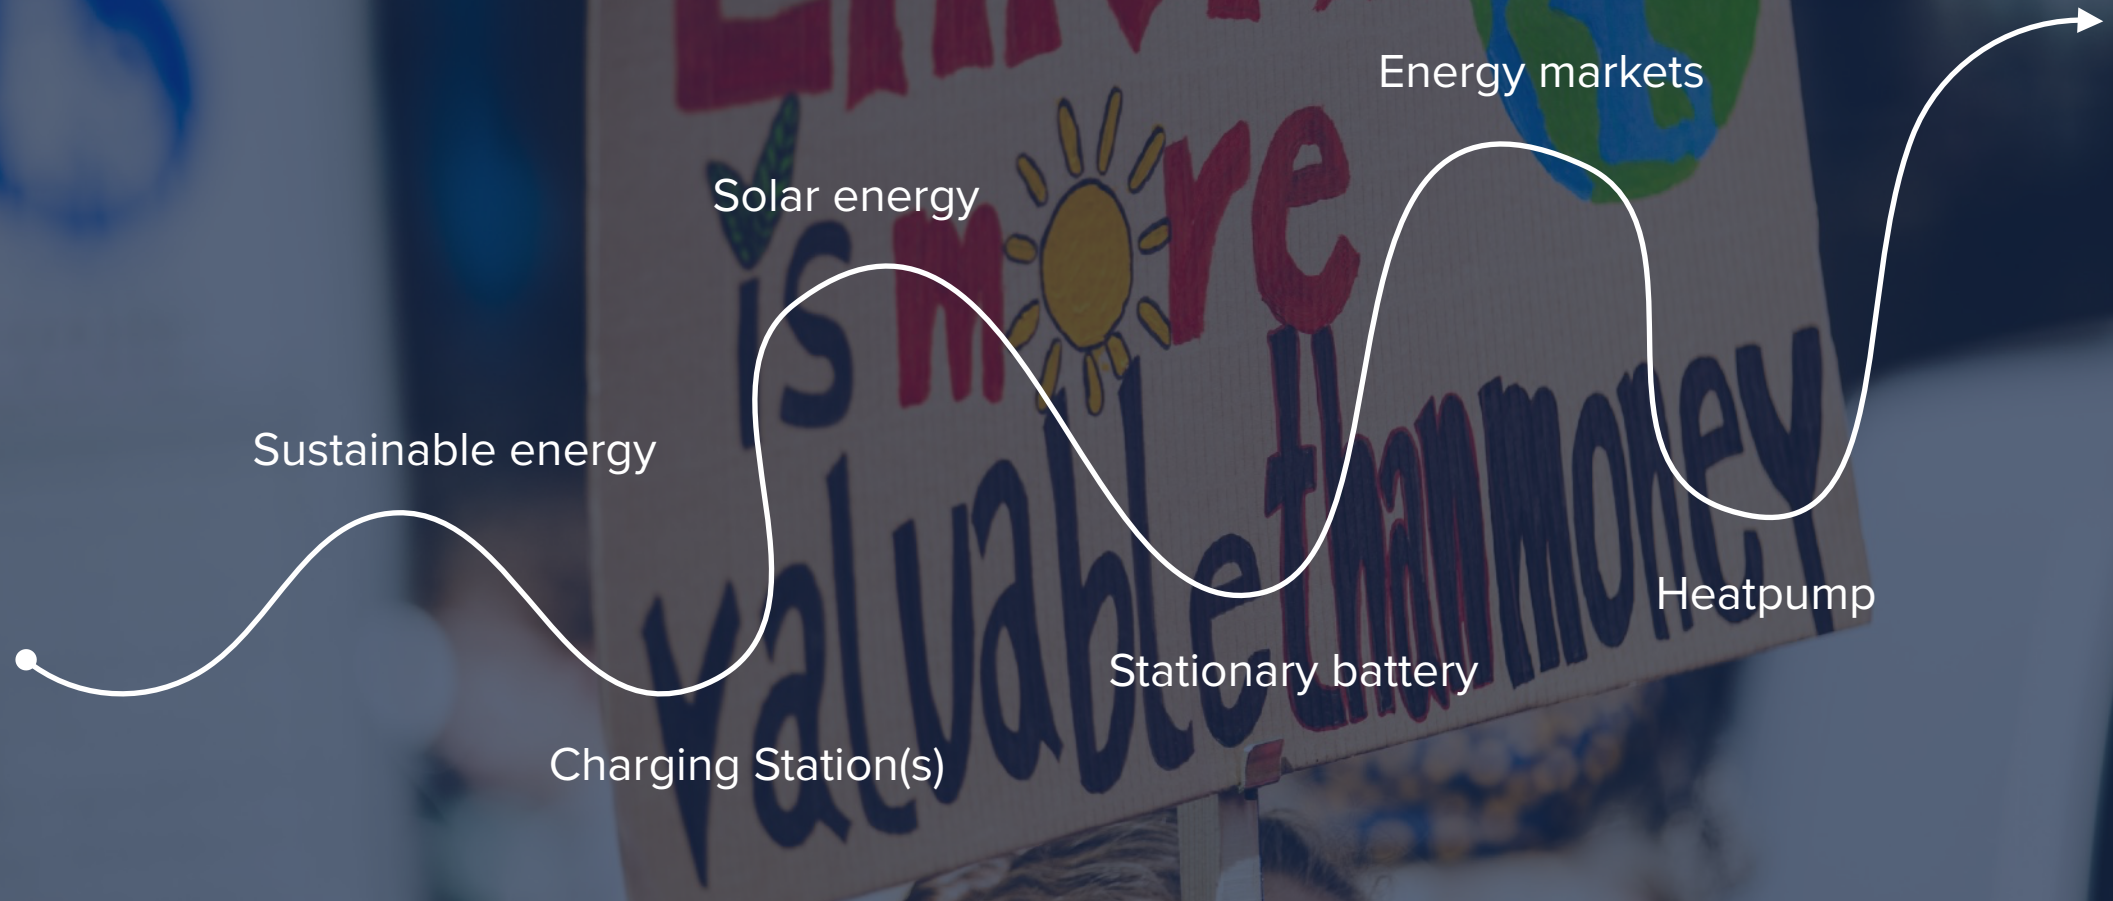

Technology developed
in-house

14 employees in
the Netherlands

MAXEM®

TRANSITION TO SUSTAINABILITY

SUPPORTING ALL CHARGING STATIONS

We have integrated almost all major brands in our EV Charging Platform. Brands such as Alfen, ABB, EVBox, Easee, Keba, Flexicharge, Schneider Electric, Wallbox and more. Both AC and DC.

This allows us to fully support customers with the following services:

- Online Asset Management
- Settlement of charging transactions with all eMSPs
- SIM card for non-wired connectivity
- Standard 24/7 support
- Link through our APIs
- And even support for paying with a debit or credit card

ENERGY MANAGEMENT

In addition to our services for Charging stations, we provide the hardware platform for indoor energy measurements. With the Maxem Hardware Platform, we ensure:

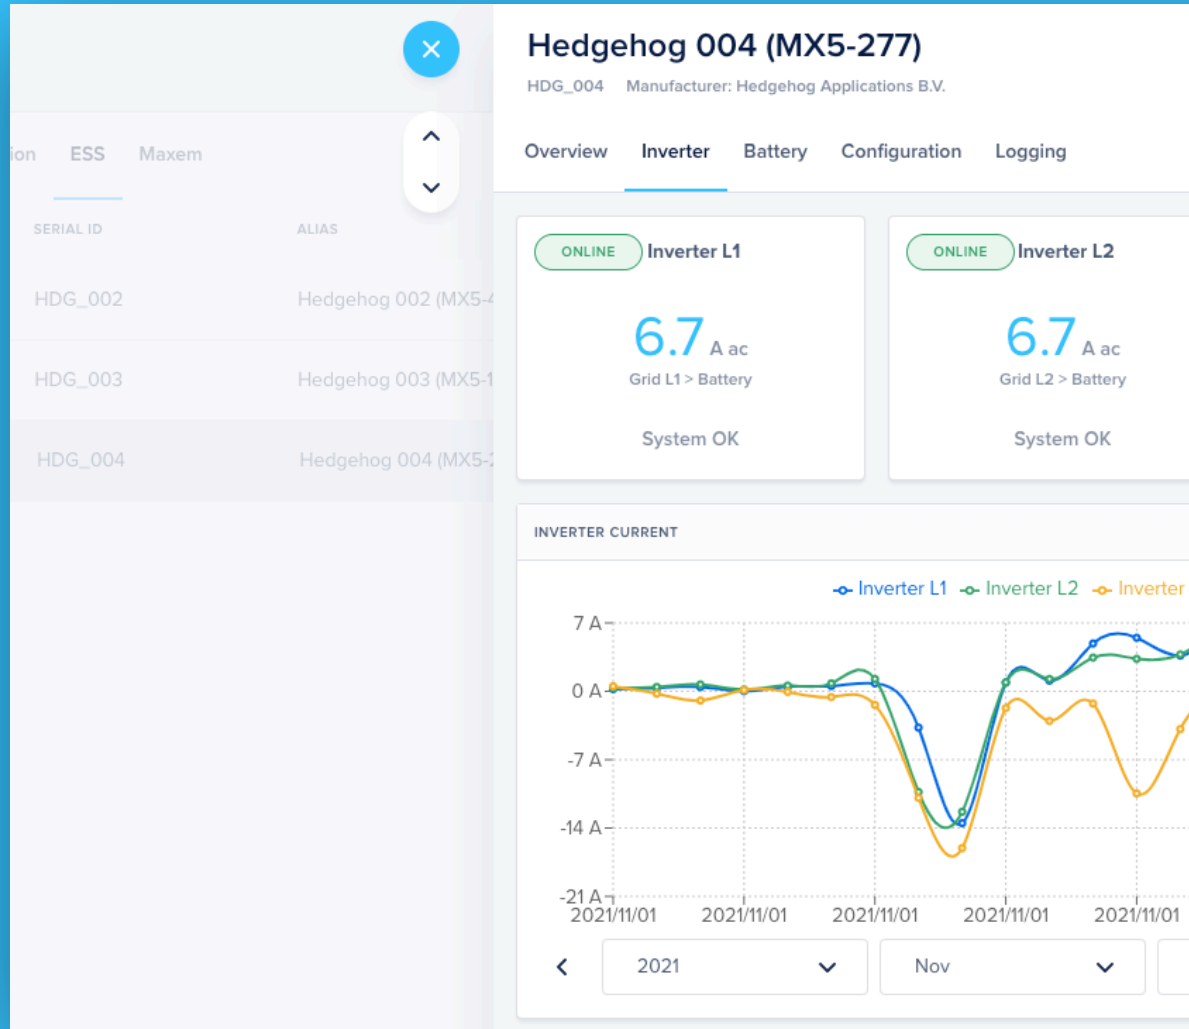

- The optimal charging speed of your charge point(s)
- Overload prevention of the mains connection and its sub-distributors.
- Charge EV's by utilizing the sun or renewable stored energy.

MONITOR AND MANAGE IOT DEVICES

In addition to charging stations, Maxem Energy Cloud makes it possible to control various other assets.

Currently we can monitor and manage stationary batteries and PV inverters, but soon all devices that a customer has connected to the internet. Such as heat pumps, buffer tanks, washing machines, scooters, forklifts, electric bicycles, lighting, you name it.

Based on this, we generate an energy profile and use this to optimize energy consumption based on sustainable energy. Self-generated, stored in a stationary battery or EV, or sustainably sourced.

TREND

More and more people
and business switch to
driving electric.

CUSTOMER QUESTION

“How can I optimize energy consumption at my location by utilizing the sun and stored renewable energy and with the ability to charge EVs and E-trucks.”

RESTRICTION

“But without feeding solar energy back into the grid”

SOLUTION

Smart Charging

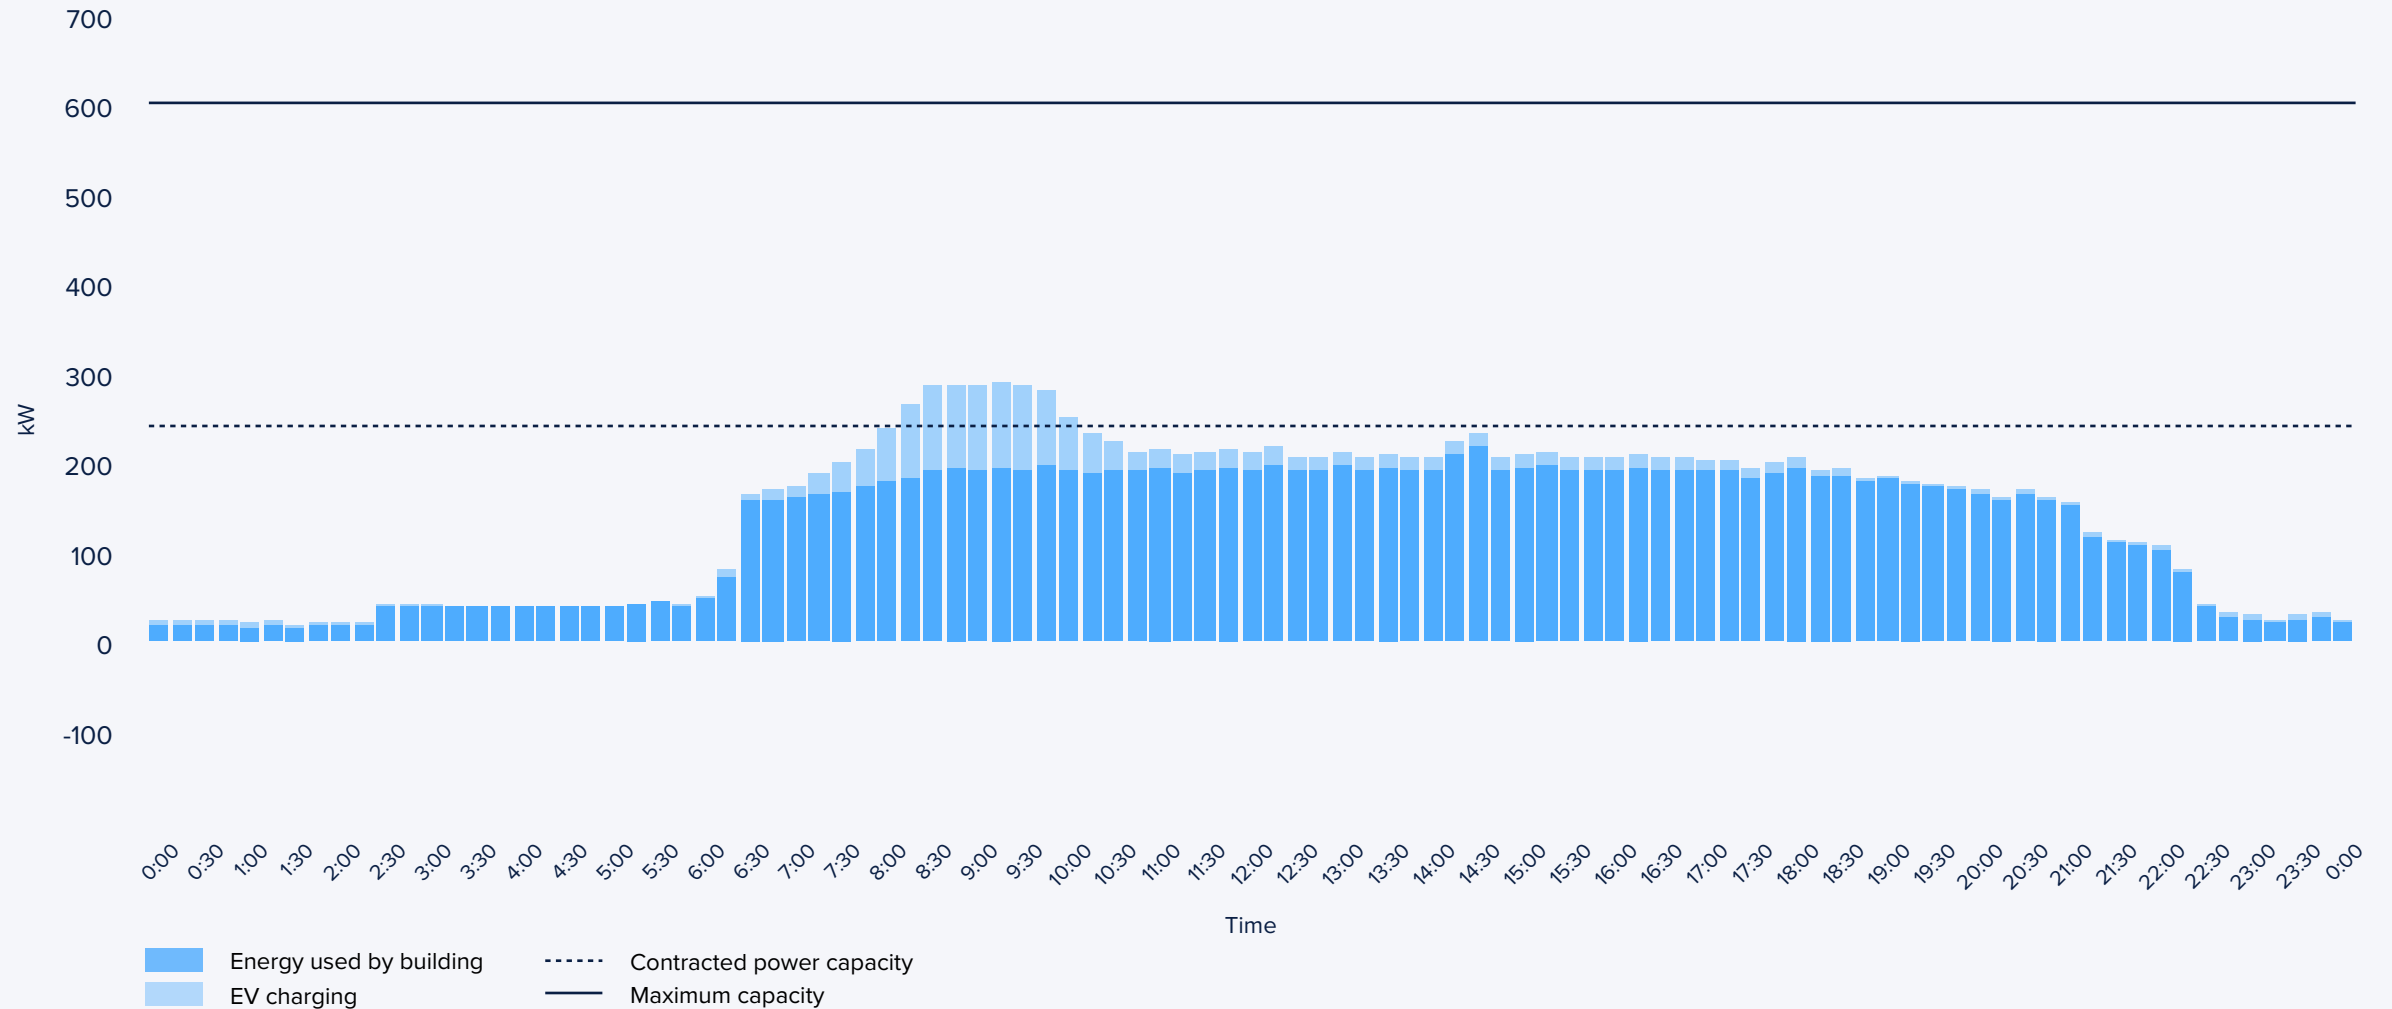

WHAT'S SMART CHARGING?

The ability to adapt the max current of Charging Stations to the needs of the EV driver and/or the location.

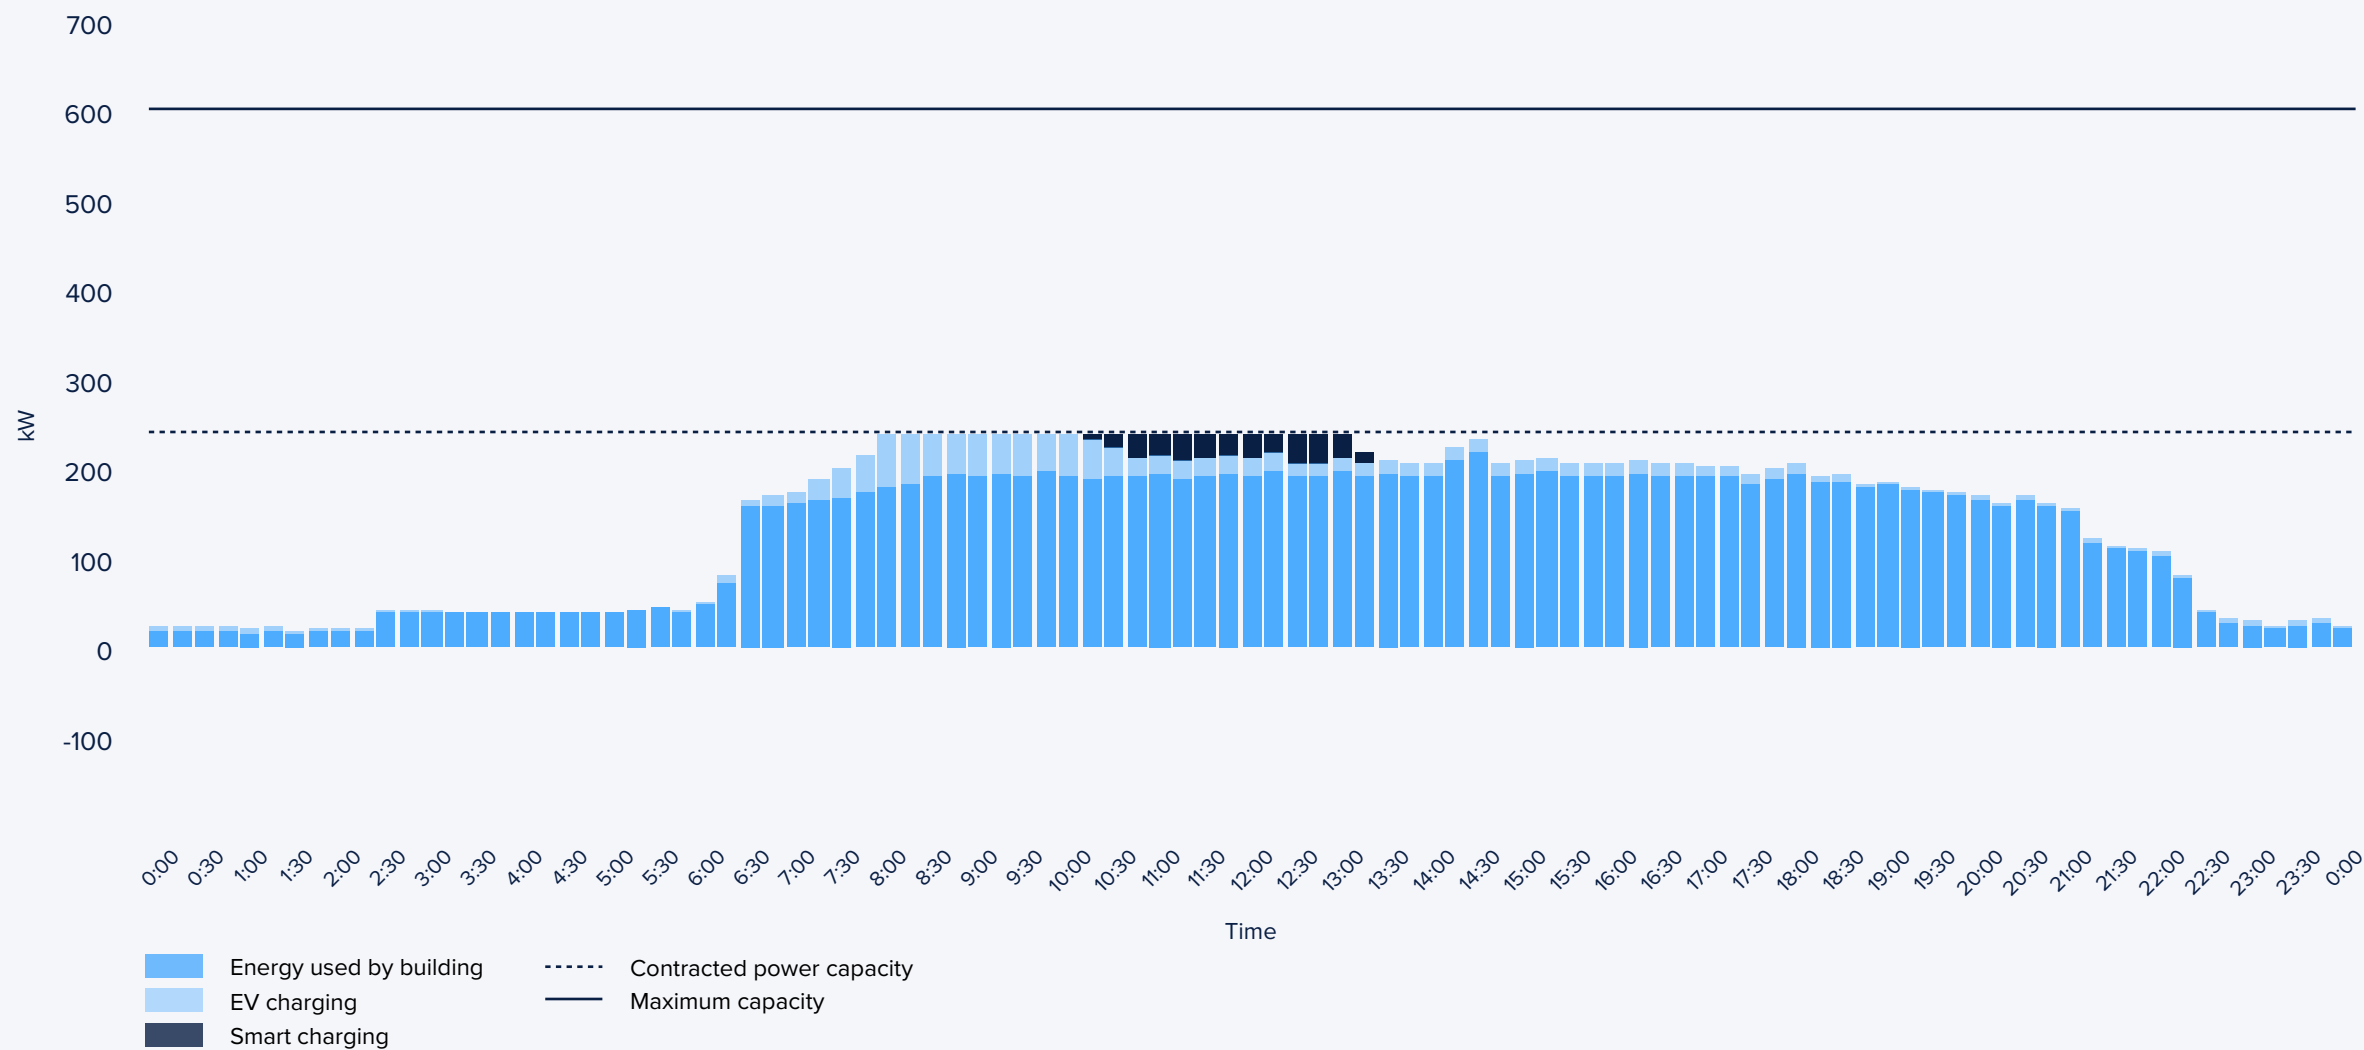

6 LEVELS OF SMART CHARGING

Level 1	Socket balancing	Balancing on each charging station between two sockets or more (normal charging).
Level 2	Location balancing	Level 1 + balancing with available capacity between charging stations at a location.
Level 3	Solar charging	Level 2 + solar charging so feed-in to the grid is minimized and 'green' charging is maximized.
Level 4	Optimized Solar Charging	Level 3 + charging profiles based on individual EV driver characteristics & EV driver input like departure time (priority charging) and available capacity.
Level 5	Optimized Solar Charging and Storage	Level 4 + added support for stationary batteries, so overcapacity of solar energy is stored for later use.
Level 6	Optimized Solar Charging and Storage connected with energy market.	Level 5 + connected with the energy markets for financially optimal purchase or sale of energy, taking into account the energy rates.

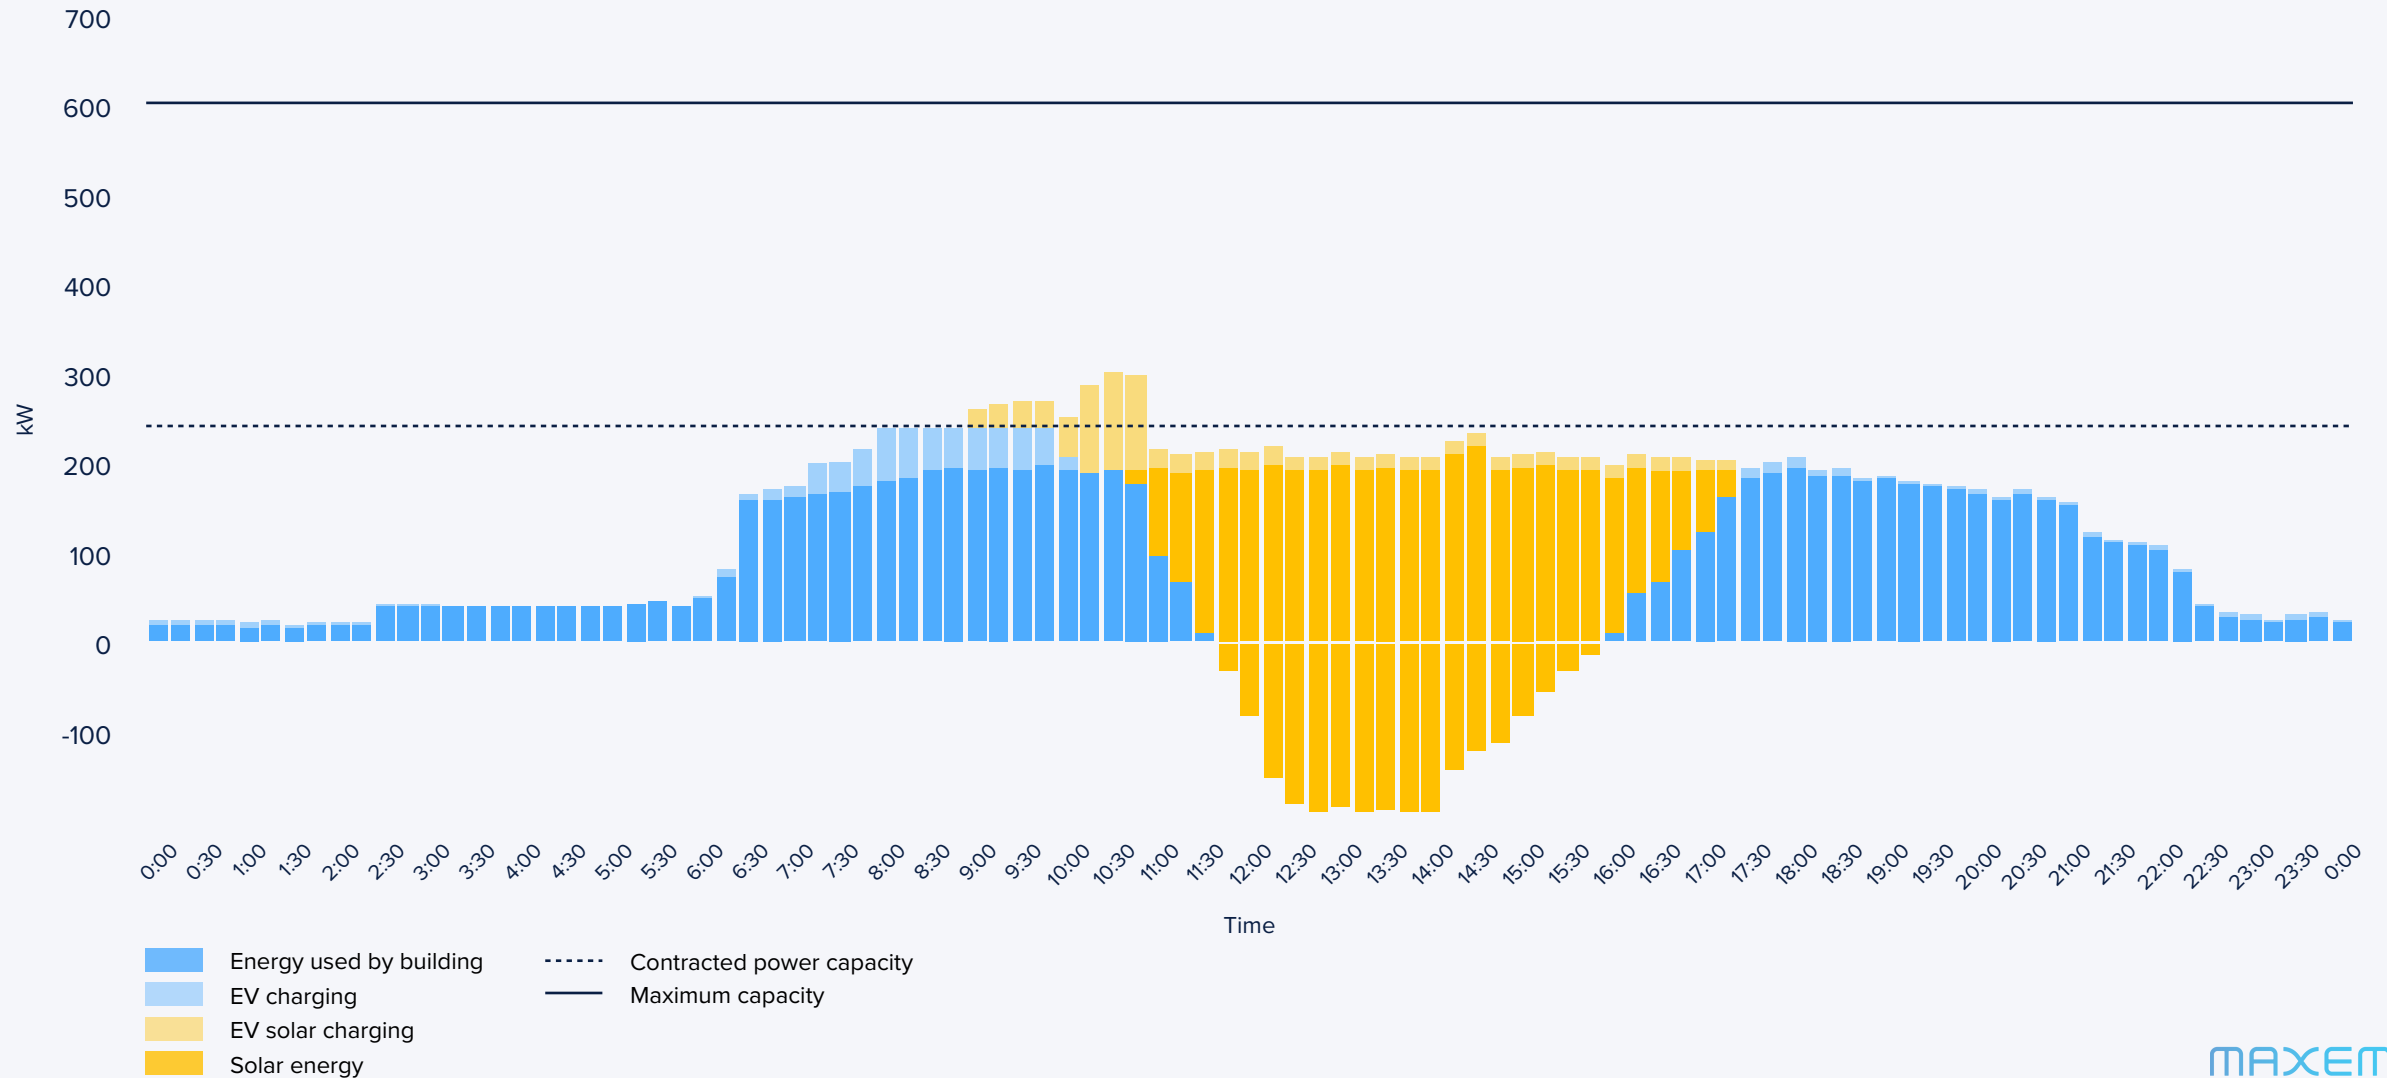

LEVEL 1 SOCKET BALANCING

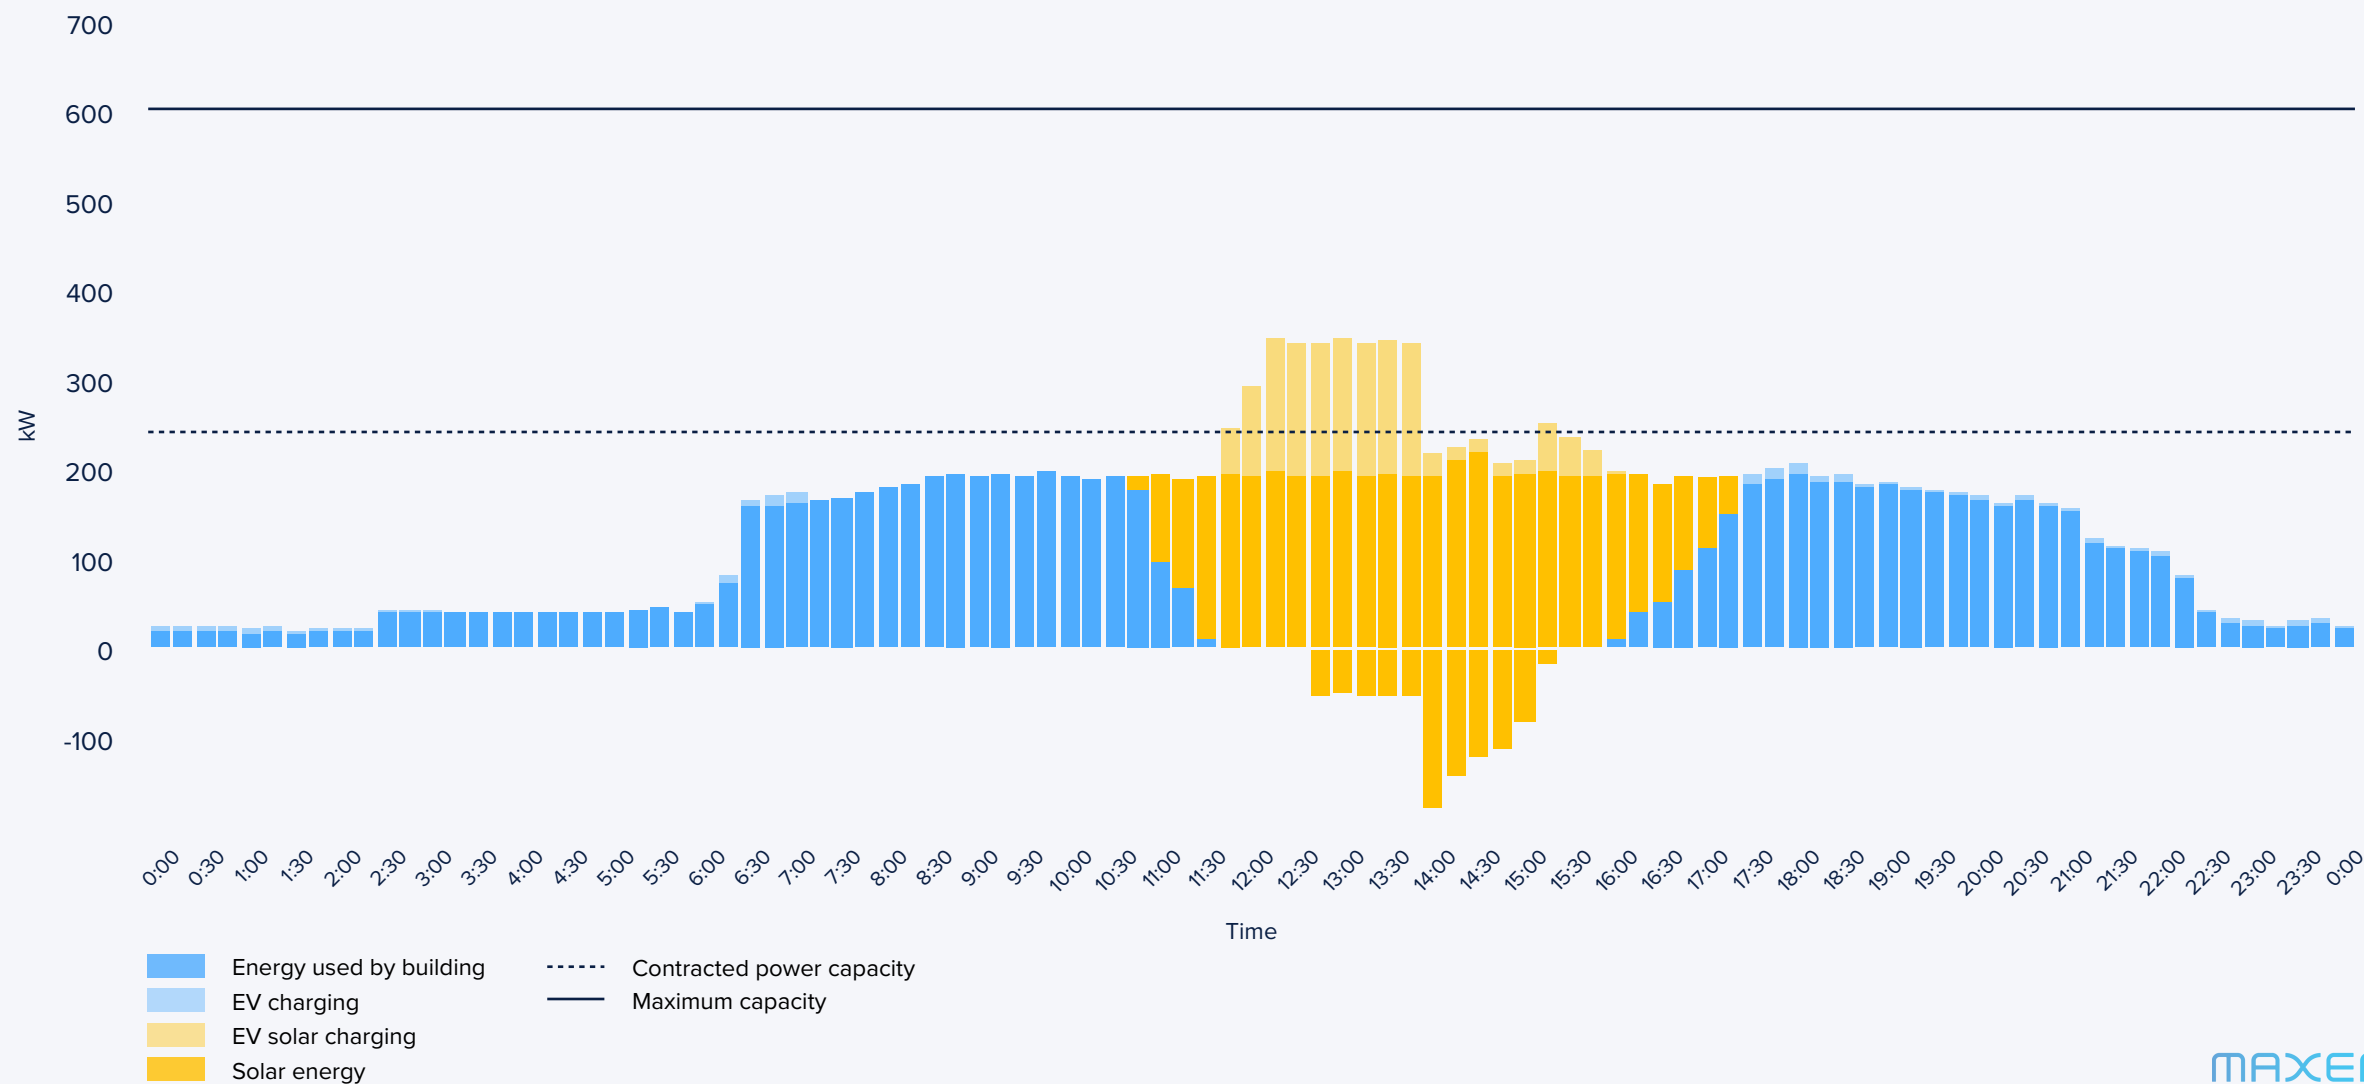

LEVEL 2 LOCATION BALANCING

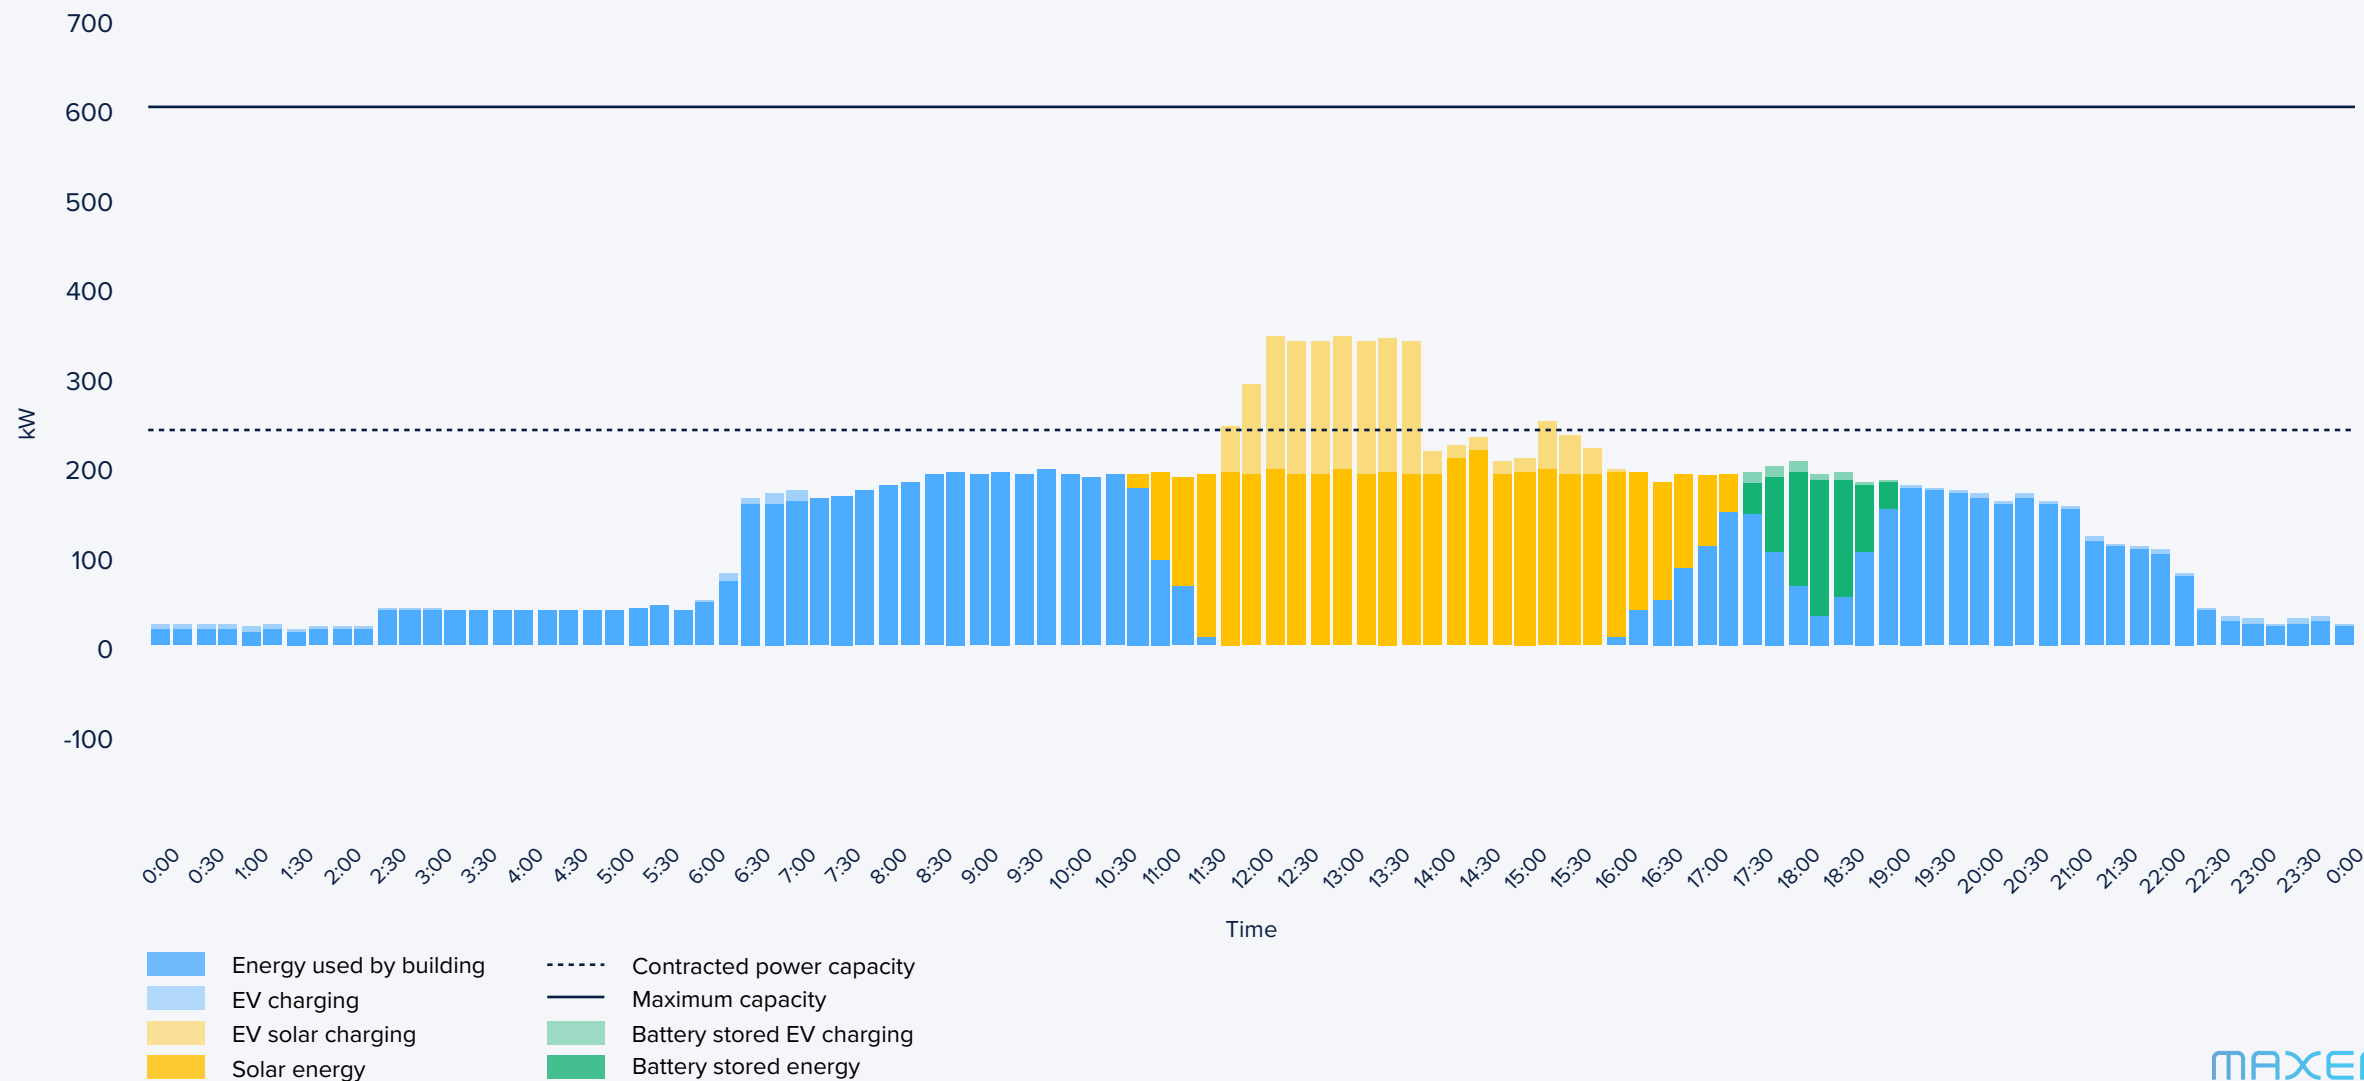

LEVEL 3 SOLAR CHARGING

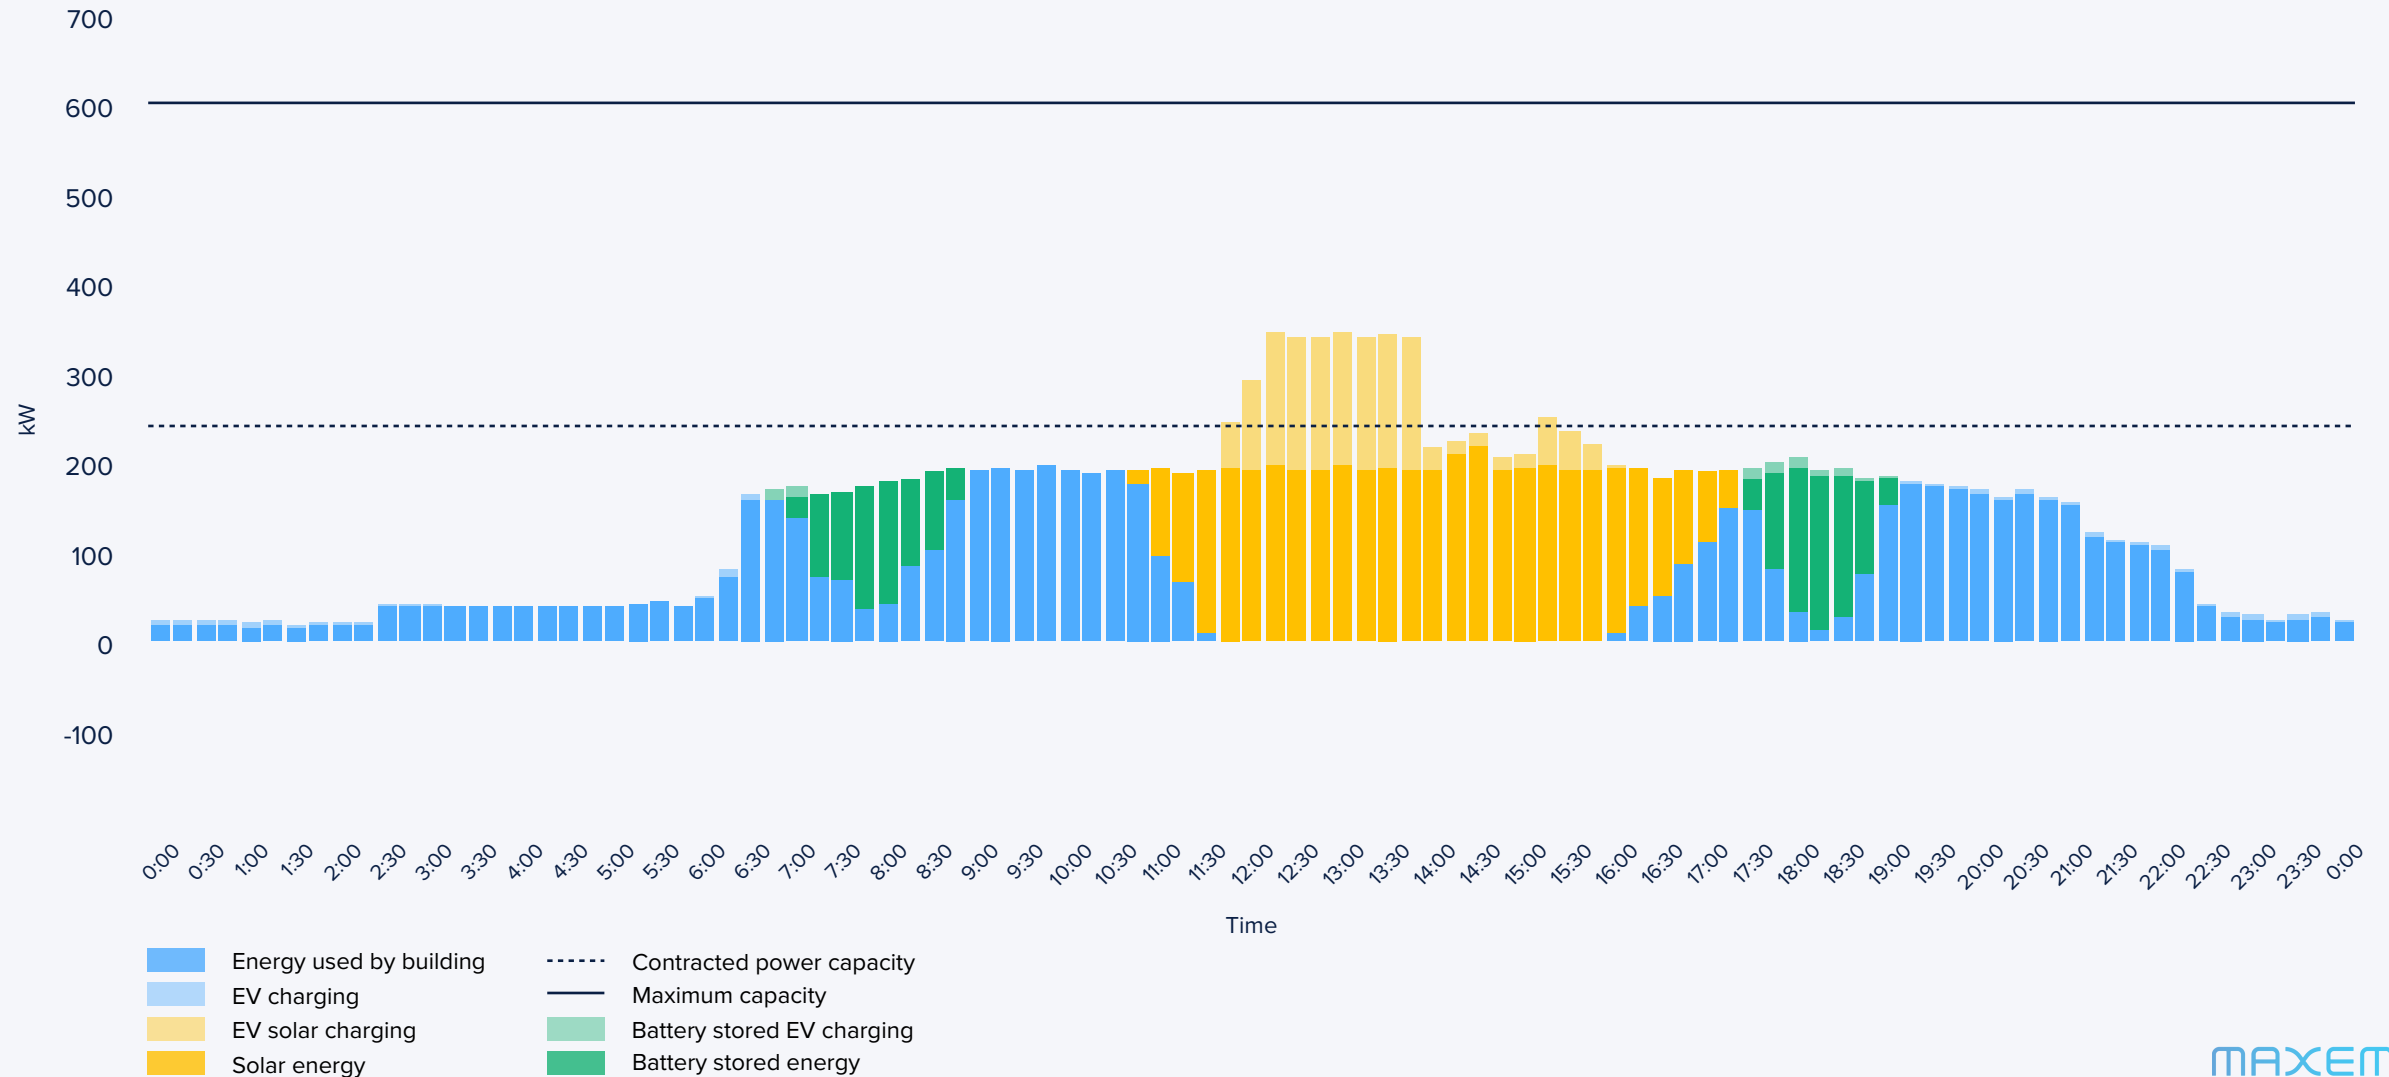

LEVEL 4 OPTIMIZED SOLAR CHARGING

LEVEL 5 OPTIMIZED SOLAR CHARGING & STORAGE

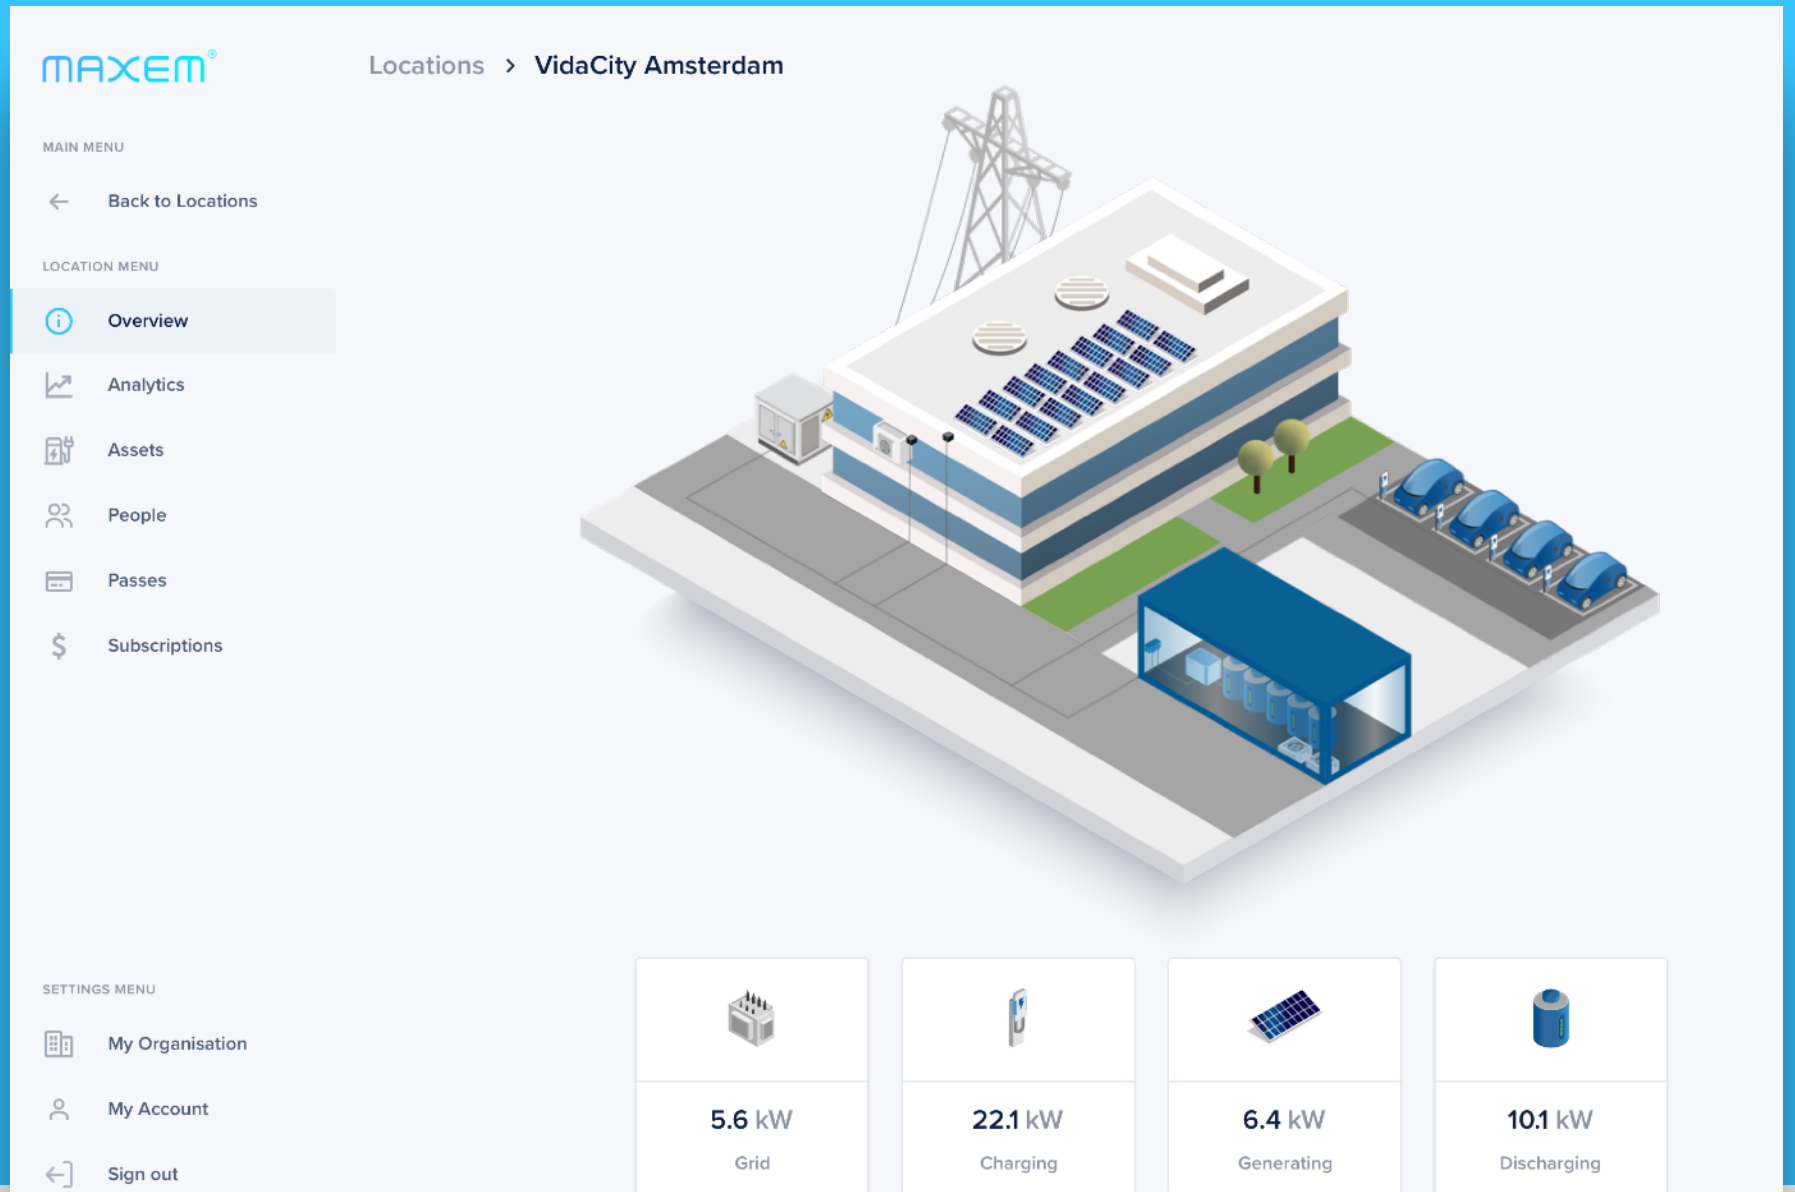

LEVEL 6 VIRTUAL POWER PLANT

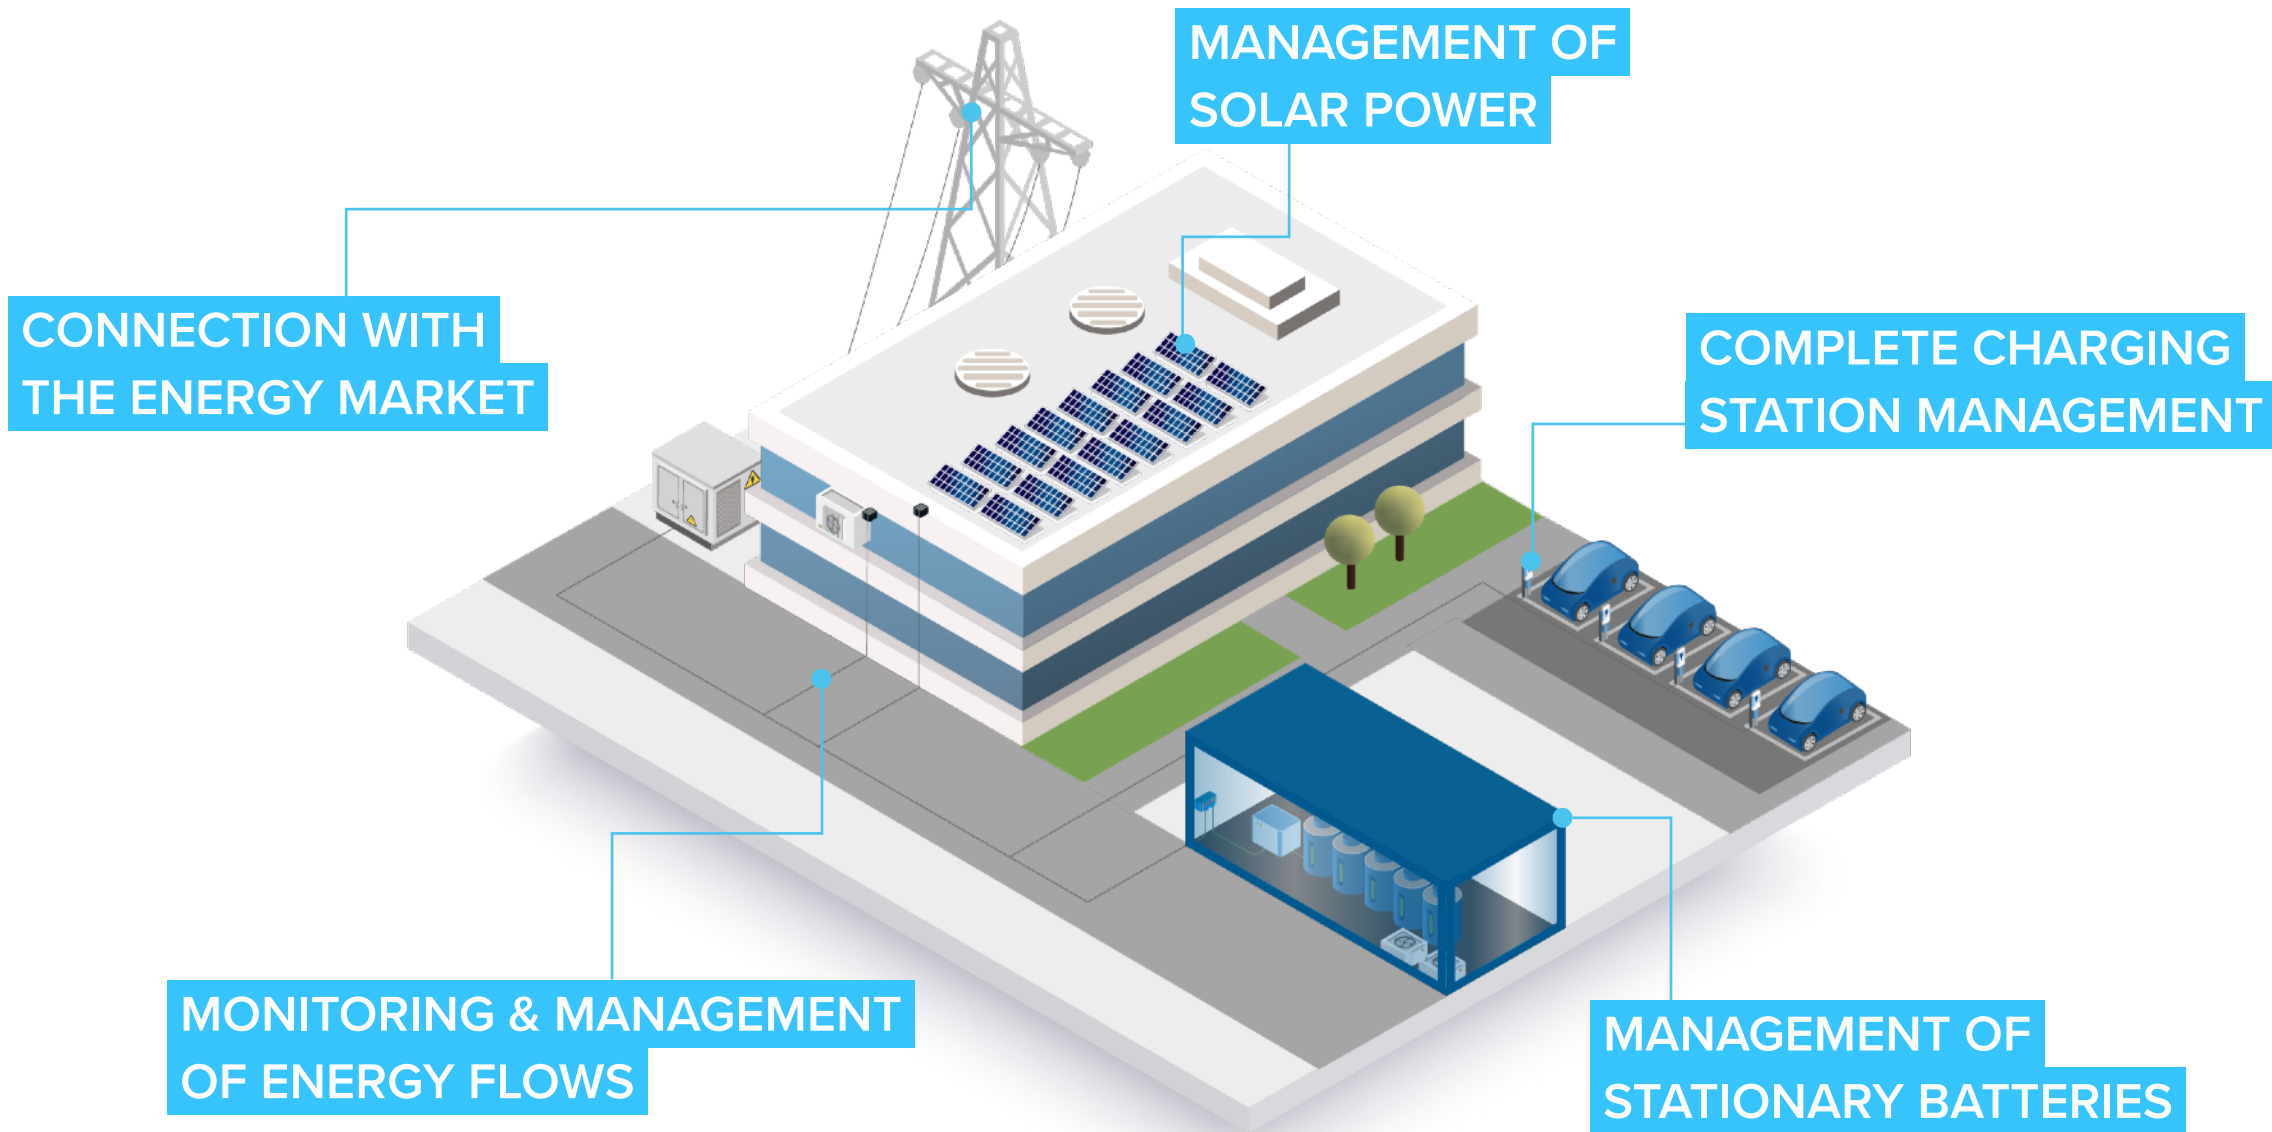

MAXEM ENERGY CLOUD

We make it possible to optimize the energy consumption of locations, such as homes and businesses to meet renewable energy production goals.

We do this with Maxem Energy Cloud and the Maxem Energy Controller, together the EMS.

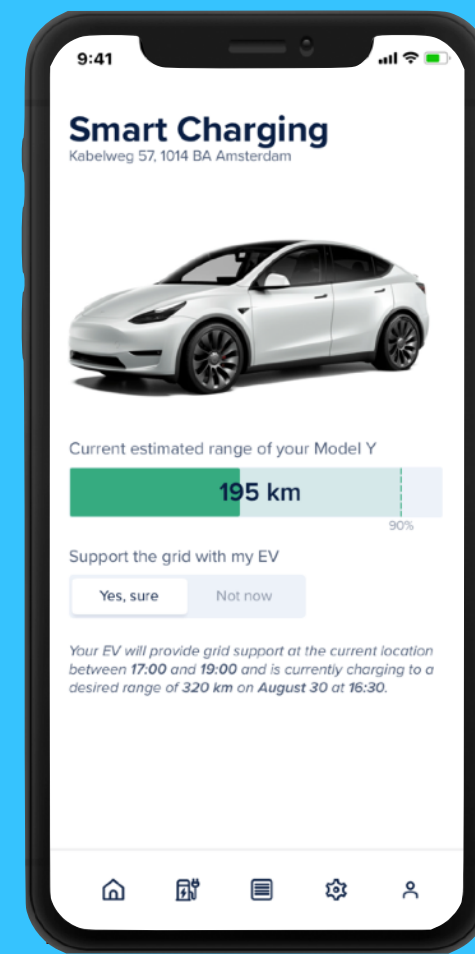

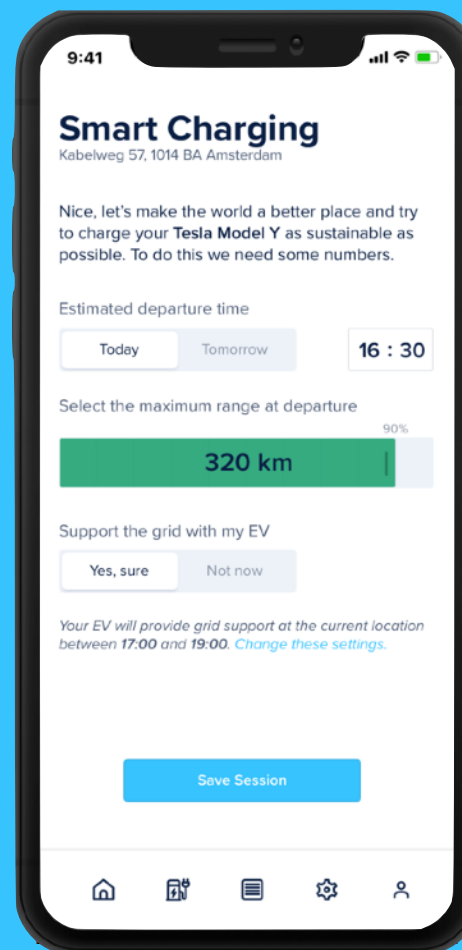

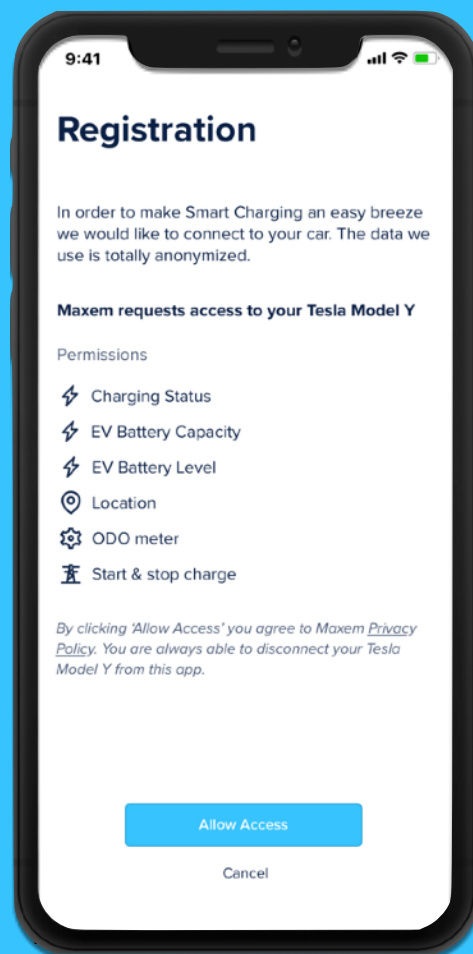

MAXEM ENERGY APP

With the help of our app, we offer customers the opportunity to take the wheel themselves.

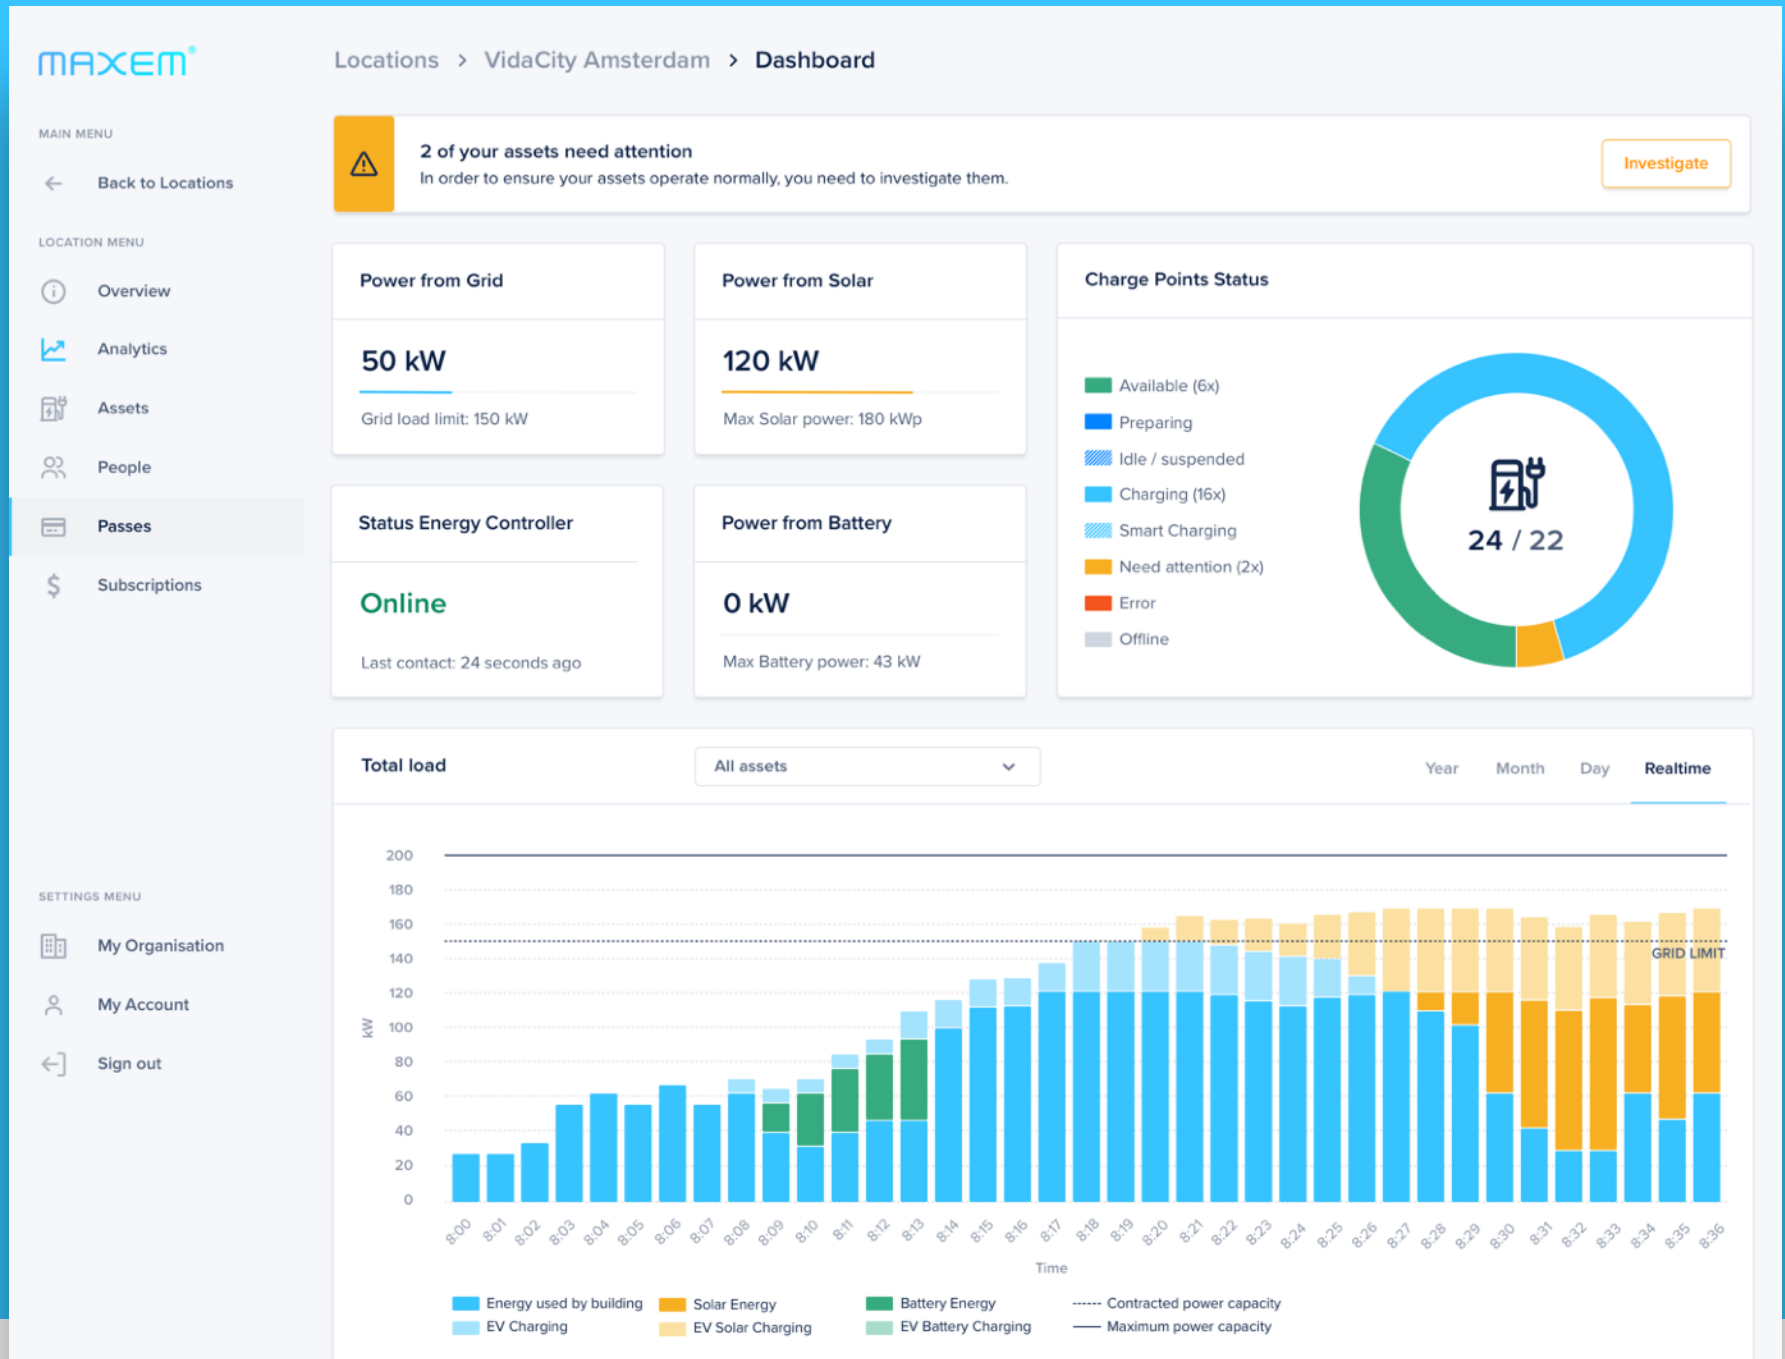

We not only offer insight, but also the possibility to be self-managing based on, for example, departure time or by entering the details of your energy contract, in order to charge and discharge smartly, or to support your own location.

SMART INSIGHTS

Based upon several datapoints we feed our algorithms and create smart profiles and solutions.

In addition we provide insights and unburden users.

Smart Charging Planning

Charging station
Dock 1

1h 49m remaining - 12A - SoC 78%
